AgroGreen-SUDOE: "Co-design of strategies for the mitigation of environmental risks in natural spaces of the SUDOE territory"

At AgroGreen-SUDOE we intend, first of all, to generate a space for collaboration that leads us to design and propose alternatives for sustainable agricultural management, sensitive to the characteristics of the territory and the realities of the producers of the SUDOE space. The final objective of the project is to design a virtual tool that allows stakeholders to assess the environmental impact of agricultural practices.

ERDF budget: 1,008,750.00 euros

Project co-financed by the Interreg V-B Southwest Europe Cooperation Program (SUDOE) through the European Regional Development Fund (ERDF).
